

Tennessee Crop Weather

Tennessee Field Office • PO Box 41505 • Nashville, TN 37204 • (615) 781-5300 or (615) 891-0903 • www.nass.usda.gov

Issued Monday 3:00 PM; July 30, 2018

For the Week Ending July 29, 2018

HAY CUTTING IN FULL SWING

Spotty showers did little to slow field work last week. Row crop farmers were busy spraying for pests, while forage producers worked on their second cutting of hay. Pasture condition declined slightly as pastures in drier areas began to show signs of stress due to lack of moisture. There were 6.3 days suitable for field work. Topsoil moisture rated 8 percent very short, 33 percent short, 53 percent adequate, and 6 percent surplus. Subsoil moisture rated 6 percent very short, 28 percent short, 65 percent adequate, and 1 percent surplus. Hay Supplies rated 1 percent very short, 19 percent short, 70 percent adequate, and 10 percent surplus.

County Agent Comments

Crop and pasture land is showing the results of a couple of weeks of dry weather. Some soybean fields look to be struggling pretty hard. Noticed some corn twisting and browning. **Kenny Herndon, Carroll County**

The farmers in Fayette County had a good week spraying pests in row crops. Other activities were hay cutting. Crops look good. **Jeff Via, Fayette County**

Producers took advantage of the dry weather to make a 2nd cutting of hay. **Jared Stricklin, Hardin County**

Forage producers in the northern part of the county can't get enough days without rain to get hay cured, while in the southern part of the county there is little hay to cut due to lack of precipitation. Corn and soybeans look great or poor depending on where you are located in the county. Corn silage harvest has already started in the southern part of the county and is moving northward. **Jeff Lannom, Weakley County**

We are starting to get a little dry. Upland crops are starting to show signs of stress. **Ronnie Barron, Cheatham County**

Best hay harvesting week since we started cutting. We are spraying some beans and putting up hay. Crops overall look good. We will need rain soon because of the hot drying days. **Larry Moorehead, Moore County**

July has seen variable rainfall across the county with some areas collecting less than an inch of measurable rain for the month so far. Grasses are dried up on shallow soils making it easy to see the outline of rocks. Corn is twisting in some locations and is starting to brown up on the lower half of the stalk and the growth rate on some later planted beans is slow. **Mitchell Mote, Rutherford County**

Second cutting of hay in full swing this week. Pastures are in pretty good shape with frequent scattered rains, but most producers indicate the first cutting of hay is about 2/3 of previous years. **Jason Evitts, Trousdale County**

Significant rains were appreciated this week. Has slowed some field work such as haying. Crops are looking good with no significant reports of issues since getting rain. High temperatures and humidity continue to stress cattle. Producers are hoping for a good fall cutting of hay as they are concerned about spring hay quality and quantity. **A. Ruth Correll, Wilson County**

Dry weather this week caused increase in hay harvest. **Steve Harris, Coffee County**

Rain and moderate temperatures have improved pasture.

Chris Ramsey, Sullivan County

Last week's rain has helped yields on hay, pasture and crops in Hawkins County.

James Blake Ramsey, Hawkins County
