

## **Tennessee Crop Weather**

Tennessee Field Office • PO Box 41505 • Nashville, TN 37204 • (615) 781-5300 or (615) 891-0903 • www.nass.usda.gov

Issued Monday 3:00 PM; July 6, 2020

For the Week Ending July 5, 2020

## ROW CROPS CONTINUE TO BENEFIT FROM TIMELY RAINS

In West Tennessee, producers were wrapping up the harvest of winter wheat and the planting of soybeans. Other activities included spraying for pests and the cutting of hay. Mid-week rains arrived at just the right time to benefit tasseling corn and emerging soybeans. In Middle Tennessee, the completion of the first cutting of hay was delayed by wet weather. This same wet weather proved beneficial to row crops, however. Cattle began to show some signs of stress due to last week's hot and humid conditions. In East Tennessee, rains were a bit more uneven, with some areas still reporting very dry circumstances. These circumstances did not appear to be widespread, however. Commercial vegetable producers reported an increase in disease and insect pressure. There were 4.5 days suitable for field work. Subsoil moisture was rated 2 percent very short, 14 percent short, 75 percent adequate and 9 percent surplus. Topsoil moisture was rated 2 percent very short, 17 percent short, 70 percent adequate, and 11 percent surplus. Hay and Roughage supplies rated 4 percent very short, 16 percent short, 68 percent adequate, and 12 percent surplus.
